Wild Winter Peas—broadcast for hay	60	20-30

# Advantages of ARASAN

1. Arasan is an effective seed *disinfectant*, generally destroying many surface seed-borne organisms.
2. Arasan is also an effective seed *protectant*, generally protecting the seed against soil-borne organisms responsible for seed decay.
3. Arasan usually improves stands of seedlings by reducing losses from seed decay and damping-off.
4. Arasan makes early planting safer by helping to protect the seed in cold, wet soils.
5. Arasan is effective under a wide variety of soil conditions, including both acid and alkaline soils.
6. Arasan, when used as directed, is harmless to well-cured seed even during long storage periods.
7. Arasan feeds freely and uniformly through powder dispensing devices on seed treaters.
8. Arasan requires no addition of graphite—treated seeds feed through the drill at practically the same rate as untreated seeds.
9. Arasan is stable and retains its full strength until used.
10. Arasan is inexpensive, easily and quickly applied.

\* \* \*

Arasan is inexpensive compared with other disinfectants. The cost of Arasan ranges from about 14 to 28c per 100 pounds of seed in the largest container to less than 1c per pound of seed in the smallest envelope. The grower usually can get more for his seed dollar by treating with Arasan.

## AMOUNTS TO USE

Arasan is a powder. It is easy to apply to seed corn, vegetable, shelled and unshelled peanut seeds. Most equipment suitable for treating seed grain or cotton, except gravity-type treaters, can be adjusted to treat these seeds with Arasan.

The following list of seeds and the rates of application of Arasan are given as a guide. Full directions are furnished with each package and should be carefully read before using.

Peanuts—2 ounces of Arasan to 100 pounds of shelled, or 3 ounces to 100 pounds of unshelled seed.

Corn (Field)— $\frac{3}{4}$  ounce of Arasan to a bushel of seed corn.

Vegetables— $\frac{1}{2}$  level teaspoonful of Arasan to 1 pound, or 2 ounces to 100 pounds of bean (string and lima), cantaloupe, corn (sweet), cucumber, pea, pumpkin, squash, and watermelon seeds.

Other Vegetables— $\frac{2}{3}$  level teaspoonful of Arasan to 1 pound, or 4 ounces to 100 pounds of seed: beet (garden), broccoli, cabbage, cauliflower, eggplant, kale, kohlrabi, mustard, onion, pepper, radish, spinach, Swiss chard, tomato and turnip seeds.

The saving in seed alone repays the cost of the treatment many times over.
